### 3 Release Information

This document is described to inform the NX-3000 Series R3.00 with the KPG-D3/D3N and the NX-5000 Series R4.00 with the KPG-D1/D1N for version up features. In this document, “SU” shows “Subscriber Unit”, “Programing Software” shows “Field Programing Unit (FPU)”.

### 3.1 S-Trunking Features

This section introduces S-Trunking features.

#### 3.1.1 Overview

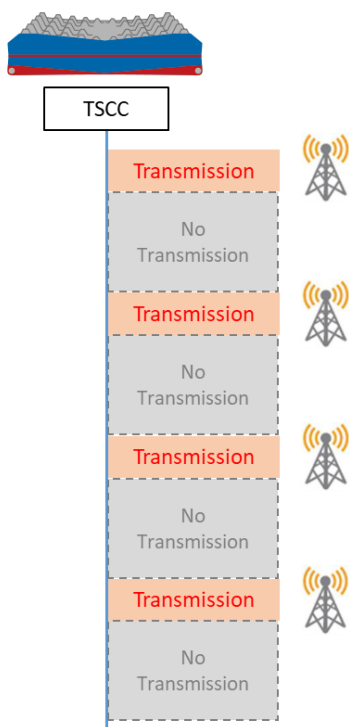

S-Trunking is JVCKENWOOD proprietary DMR-based TDMA Trunking system.

Presently, we support DMR Tier III Trunking, and it’s a centralized trunked relay system that has exclusive control channel (FB8)\*. In this system, each site has a Trunking Station Control Channel (TSCC) which transmits continuously. Therefore, it can provide large-scale and stably communication service to a Subscriber Unit (SU). However, DMR Tier III Trunking doesn’t conform shared channel (FB6)\* licenses for private carriers, a user shares frequencies with anther user/agencies, because a site’s TSCC exclusively occupies a frequency.

JVCKENWOOD newly supports S-Trunking to conform shared channel licenses environment. In order to conform it, a TSCC is basically transmitted intermittently, please refer the following table and figure. So, our customer can deploy trunked systems under private carrier licenses.

**Table: System specification**

|                          | S-Trunking system      | DMR Tier III Trunking system |
|--------------------------|------------------------|------------------------------|
| <b>Specifications</b>    | JVCKENWOOD proprietary | ETSI TS 102 361-4            |
| <b>TSCC transmission</b> | intermittently         | continuously                 |

**Figure: S-Trunking site**

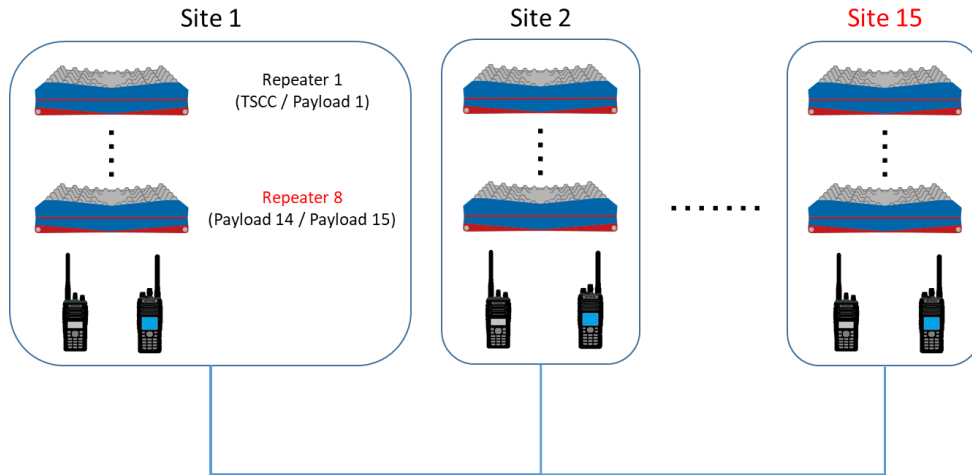

**Figure: DMR Tier III Trunking site**

Note:

Shared channel (FB6) and Exclusive control channel (FB8) are Station Class Codes defined by the FCC of United States. The code describes the purpose for which a particular station is used.

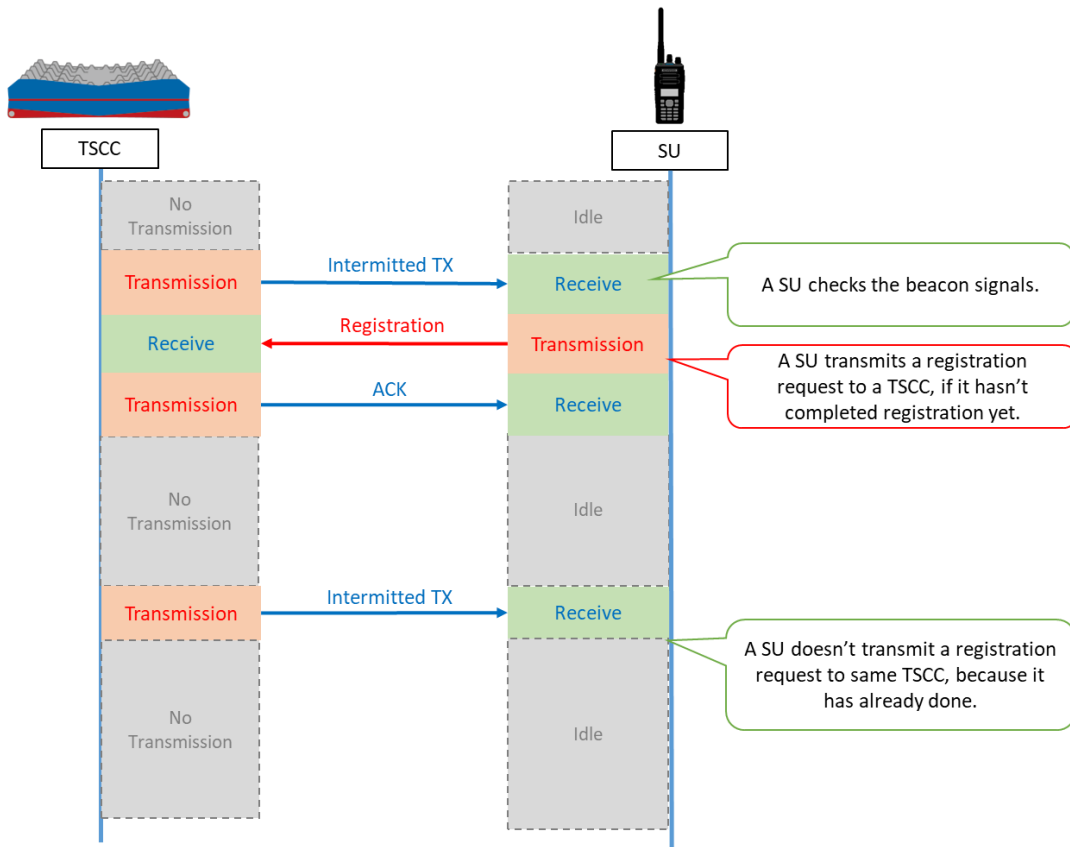

### ➤ System Size

S-Trunking consists with up to 15 sites and 8 repeaters (1 TSCC and 15 Payload) for each site.

### ➤ Hunt and Registration

A SU (Subscriber Unit) has to register own ID to the S-Trunking system to use various services. A TSCC of each site periodically transmits a beacon signal containing system information. So, a SU is scanning and checking the beacon signals to register automatically when it detects an available system. If it couldn't register to any system for a certain period time, it will indicate "Out of Range" by beep sounds or warning display.

Note:

System Key File (SKF) is not required to register to a system.

➤ **Carrier Sense (Busy Channel Lockout)**

Under shared channel licenses environment, a SU basically should conduct carrier sense before transmitting to avoid interference with another user/agencies.

Note:

To restrict transmission actually, "Busy Channel Lockout" should be enable on FPU.

- If a SU receives an outbound signaling of an available TSCC, it is able to transmit uplink.

Outbound from TSCC

- If a SU detects a carrier of another system, uplink transmission is restricted by Busy Channel Lockout (BCL) feature.

No outbound from TSCC

Outbound from another system

- If a SU doesn't receive any outbound signal, it is able to transmit uplink.

No outbound from TSCC

No outbound from another system

### 3.1.2 Features Compalison

| Features                             |                             | S-Trunking System   | DMR Tier III Trunking System |
|--------------------------------------|-----------------------------|---------------------|------------------------------|
| Control Channel Hunt                 | Resuming Hunt               | ✓                   | ✓                            |
|                                      | Preferential Hunt           | ✓                   | ✓                            |
|                                      | Short (Normal) Hunt         | ✓                   | ✓                            |

| Emergency Alarm                      |                             | ✓                   | ✓                            |
| Emergency Status                     |                             | ✓                   | ✓                            |
| Encryption Call                      | Enhanced Encryption (ARC-4) | N/A                 | ✓                            |
|                                      | DES                         | ✓                   | ✓                            |
|                                      | AES                         | ✓                   | ✓                            |
|                                      | Bit Scrambler               | ✓                   | ✓                            |
| Remote Stun/Revive/Kill              |                             | ✓                   | ✓                            |
| Remote Monitor                       |                             | ✓                   | ✓                            |
| Radio Check                          |                             | ✓                   | ✓                            |
| OAA (Over-the-Air Alias)             |                             | ✓                   | ✓                            |
| Dialing (Fleet Dialing Plan)         |                             | ✓                   | ✓                            |
| Group ID Scan/Single Zone Scan       |                             | ✓                   | ✓                            |
| Alternate Zone-Channel               |                             | N/A                 | ✓                            |
| Busy Channel Lockout (Carrier Sense) |                             | ✓                   | N/A                          |

Note:

- To use “Fleet Dialing Plan”, checkbox should be enabled on FPU.
- In case of S-Trunking system, “Battery Saver” always enable during intermitted downlink without any configuration on FPU.

### 3.1.3 Radio Feature Licenses

➤ **NX-5000 Series**

Following license is required to use the S-Trunking for NX-5000 series.

| Model Name            | License Key                      | Description                                 |
|-----------------------|----------------------------------|---|
| <b>NX-5000 Series</b> | KWD-5300CV<br>(DMR Conventional) | License for DMR Conventional and S-Trunking |

➤ **NX-3000 Series**

Following license is required to use the S-Trunking for NX-3000 series.

| Model Name   | License Key                             | Description                                     |
|--|---|---|
| <b>NX-32x0 Series *1</b><br><b>NX-33x0 Series *1</b><br><b>NX-37x0 Series *1</b><br><b>NX-38x0 Series *1</b><br><b>(NX-3x27 Series) *2</b> | KWD-3501TR<br>(DIGITAL TRUNKING OPTION) | License for NXDN Type-C Trunking and S-Trunking |
| <b>NX-34x0 Series</b><br><b>NX-392x Series</b>   | KWD-3301CV<br>(DMR CONVENTIONAL)        | License for DMR Conventional and S-Trunking     |

Note:

\*1. If Market Code is E, E2 or E3, "KWD-3501TR" is activated by default.

\*2. If Model Name is NX-3x27 Series, "KWD-3501TR" is activated by default.

## 3.2 New Mic Information

This section informs a new Mic.

### 3.2.1 Three PF keys Mic Model

NX-3000/5000 supports KMC-70 and KMC-72, a microphone for portable model with universal connector. In addition, KMC-70 equips three PF keys.

|               | Type | Connector | Portable | Mobile | PF 1 | PF 2 | PF3 |
|---------------|------|-----------|----------|--------|------|------|-----|
| <b>KMC-70</b> | M    | Universal | ✓        | N/A    | ✓    | ✓    | ✓   |
| <b>KMC-72</b> | M    | Universal | ✓        | N/A    | ✓    | ✓    | N/A |

An audio condition for KMC-70 and KMC-72 should be set as follow.

- KPG-D1: Transceiver Settings > Audio Profile > General
- KPG-D3: Radio Configuration > Special Settings > Customization > Audio Profiles > General

|               | Speaker Type | Microphone Type |
|---------------|--------------|-----------------|
| <b>KMC-70</b> | Speaker 1    | Microphone 5    |
| <b>KMC-72</b> | Speaker 2    | Microphone 5    |

A function for PF1 and PF2 can be set to PF3 as well.

- KPG-D1: Transceiver Settings > Key Assignment > Mic Key
- KPG-D3: Radio Configuration > Global Options > Button Assignment > Microphone

|     | Function | 2nd Function | Hold Function | Hold Delay [s] |
|-----|----------|--------------|---------------|----------------|
| PF1 | None     | None         | None          | 1.0            |
| PF2 | None     | None         | None          | 1.0            |
| PF3 | None     | None         | None          | 1.0            |

## 4 Compatibility of programming software

### 4.1 KPG-D1/D1N

This section describes backward compatibility of previous version of Firmware and programming software (KPG-D1/D1N).

[Definition]

Open: Opening a Data File by programming software  
 Read: Reading programming data from subscriber unit  
 Write: Writing programming data to subscriber unit  
 New Data: A data file was generated by programming software Version 4.00  
 Old Data: A data file was generated by programming software version prior to 3.10

#### 4.1.1 Compatibility of Opening a Data File

|                                    |         |               |      | New Data | Old Data |
|------------------------------------|---------|---------------|------|----------|----------|
| Programming Software<br>KPG-D1/D1N | Version | 4.00          | Open | ✓        | ✓        |
|                                    |         | Prior to 3.10 | Open | N/A      | ✓        |

#### 4.1.2 Compatibility of Writing and Reading a Data File

|                                    |               |       | Write /<br>Read | Firmware version |                 |
|------------------------------------|---------------|-------|-----------------|------------------|-----------------|
|                                    |               |       |                 | 4.00             | Prior 3.10      |
| Programming Software<br>KPG-D1/D1N | Version       | 4.00  | Read            | ✓                | ✓               |
|                                    |               |       | Write           | ✓                | ✓ <sup>*1</sup> |
|                                    | Prior to 3.10 | Read  | N/A             | ✓                |                 |
|                                    |               | Write | ✓               | ✓ <sup>*1</sup>  |                 |

#### Note:

\*1:

##### writable

- In case if unsupported functions for older firmware are not included.
- In case that there will not be a possibility to cause trouble even if unsupported functions for older firmware are included. This case, the warning message will be shown.  
(This is judged by Programming Software according to Firmware version and the contents of Programming data)

##### unwritable

- In case that there will be a possibility to cause trouble if unsupported functions for older firmware are included. This case, the error message will be shown.

## 4.2 KPG-D3/D3N

This section describes backward compatibility of previous version of Firmware and programming software (KPG-D3/D3N).

| Open:     | Opening a Data File by programming software                             |
| Read:     | Reading programming data from subscriber unit                           |
| Write:    | Writing programming data to subscriber unit                             |
| New Data: | A data file was generated by programming software Version 3.00          |
| Old Data: | A data file was generated by programming software version prior to 2.10 |

### 4.2.1 Compatibility of Opening a Data File

|                                 |         |            |      | New Data | Old Data |
|---------------------------------|---------|------------|------|----------|----------|
| Programming Software KPG-D3/D3N | Version | 3.00       | Open | ✓        | ✓        |
|                                 |         | Prior 2.10 | Open | N/A      | ✓        |

### 4.2.2 Compatibility of Writing and Reading a Data File

|                                 |               |       |       | Write / Read | Firmware version |               |
|---------------------------------|---------------|-------|-------|--------------|------------------|---------------|
|                                 |               |       |       |              | 3.00             | Prior to 2.10 |
| Programming Software KPG-D3/D3N | Version       | 3.00  | Read  | ✓            | ✓                |               |
|                                 |               |       | Write | ✓            | ✓*1              |               |
|                                 | Prior to 2.10 | Read  | N/A   | ✓            |                  |               |
|                                 |               | Write | ✓     | ✓*1          |                  |               |

#### Note:

\*1:

#### writable

- In case if unsupported functions for older firmware are not included.
- In case that there will not be a possibility to cause trouble even if unsupported functions for older firmware are included. This case, the warning message will be shown.  
(This is judged by Programming Software according to Firmware version and the contents of Programming data)

#### unwritable

- In case that there will be a possibility to cause trouble if unsupported functions for older firmware are included. This case, the error message will be shown.

## 5 Product Version

| Product  | Supported Version in Release |
|--|------------------------------|
| Subscriber Units:<br>NX-5000 Series                    | 4.00 or later                |
| Programming Software for NX-5000 Series:<br>KPG-D1/D1N | 4.00 or later                |
| Subscriber Units:<br>NX-3000 Series                    | 3.00 or later                |
| Programming Software for NX-3000 Series:<br>KPG-D3/D3N | 3.00 or later                |
